# SKYWORKS

### DATA SHEET

# SMV2019-SMV2023: Silicon Hyperabrupt Junction Varactors, Packaged and Bondable Planar Chips

## **Applications**

• VCOs

# **Features**

- High Q for low-loss resonators
- Low leakage current
- High tuning ratio for wideband VCOs
- SPICE model parameters
- Small footprint chip design

Skyworks Green<sup>™</sup> products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green<sup>™</sup>*, document number SQ04-0074.

# **Description**

Skyworks silicon hyperabrupt junction varactor diodes are processed using established ion-implantation technology resulting in low series resistance, wide tuning ratio devices with high Q values. These diodes are available as chips or in ceramic packages. The planar chips have a small outline size (12 x 12 mils, nominal) and are fully passivated, which results in low leakage current and high reliability. These varactor chips are intended for assembly in hybrid integrated circuit resonators used in Voltage Controlled Oscillators (VCOs) and analog tuned filters.

The absolute maximum ratings of the SMV2019-SMV2023 varactors are provided in Table 1. Electrical specifications are specified in Table 2. Typical capacitance values are listed in Table 3.

The SPICE model is shown in Figure 1. SPICE parameters are listed in Table 4. Typical performance characteristics are provided in Figures 2 and 3.

| Parameter             | Symbol | Minimum | Typical | Maximum | Units |
|-----------------------|--------|---------|---------|---------|-------|
| Power dissipation     | Pdis   |         |         | 250     | mW    |
| Reverse voltage       | VR     |         |         | 22      | V     |
| Forward current       | lF     |         |         | 100     | mA    |
| Operating temperature | Тор    | -55     |         | +150    | °C    |
| Storage temperature   | Тѕтс   | -65     |         | +200    | °C    |

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value.

**CAUTION**: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Note 1: Performance is guaranteed only under the conditions listed in this Table and is not guaranteed over the full operating or storage temperature ranges. Exceeding any of the conditions listed here may result in permanent damage to the device.

Note 2: 50 MHz Q calculated from 1 GHz Rs and 1 MHz CJ.

Note 3: VB at 10 µA specified at 22 V, minimum.
