Description:

The Powerex POW-R-PAK™ is a configurable IGBT based power assembly that may be used as a converter, chopper, half or full bridge, or three phase inverter for motor control, power supply, UPS or other power conversion applications.

The power assembly is mounted on a forced air-cooled heatsink and features state-of-the-art Powerex IGBTs with low conduction and low switching losses for high efficiency operation. The POW-R-PAK™ includes a low inductance laminated bus structure, optically isolated gate drive interfaces, isolated gate drive power supplies, and a DC-link capacitor bank. The control board provides a simple user interface along with built-in protection features including overvoltage, undervoltage lockout, overcurrent, overtemperature, and short circuit detection.

Depending on application characteristics, the POW-R-PAK™ is suitable for operation with DC bus voltages up to 800VDC and switching frequencies below 20kHz.

Features:

- ☐ High performance IGBT inverter bridge
- ☐ Integrated gate drive with fault monitoring and protection
- ☐ System status / troubleshooting LEDs to verify or monitor proper operation
- ☐ Isolated gate drive power supplies
- ☐ Low inductance laminated bus
- ☐ Output current measurement and feedback
- ☐ Superior short circuit detection & shoot through prevention

20	Heatsink Temperature	Analog Voltage Representation of Heatsink Temperature
21	AGND ²	Tied to Pins 10 and 11
22	I _{OUT} Phase A	Analog Voltage Representation of Output Current
23	AGND ²	Tied to Pins 10 and 11
24	I _{OUT} Phase B	Analog Voltage Representation of Output Current
25	AGND ²	Tied to Pins 10 and 11
25	N/C	No Connect - Do Not Ground

1. Open collectors can be pulled up to 30V max. and sink 50mA continuous.

2. AGND signals to be used for analog feedback signals (i.e. twisted pair with I_{OUT} Phase A).

3. On the board is a jumper that enables fault reset by bringing all leg control signals low for 10 microseconds (default).
