**外部基準電圧 External reference voltage**

Refピンを使用しない場合、未接続として下さい。

If you do not want to use the Ref pin, please unconnected.

Refピンは、Ref IN と Ref OUT の二種類のモードがあります。

The Ref pin has two modes Ref IN and Ref OUT:

・Ref OUT モードは、高精度の2.5V内部リファレンスを両極性の電流検出の基準として使用します。

この内部基準電圧は、680Ω抵抗を経由してRefピンに接続されています。

シンク及びソース電流は最大±5mAに制限されていますが、680Ω抵抗により許容範囲に抑えられます。

・In the Ref OUT mode the 2.5V internal precision reference is used by the transducer as the reference point for bipolar measurements; this internal reference is connected to the Ref pin of the transducer through the 680 ohms resistor. it tolerates sink and source current up to ±5mA, but the 680 ohms resistor prevent this current to exceed these limits.

・Ref IN モードは、外部基準電圧をRefピンに接続します。外部基準電圧は0~4Vまで供給可能です。

供給した電圧は、測定時の基準電圧となります。

・In the Ref IN mode, an external reference voltage is connected to the Ref pin; this voltage is specified in the range 0 to 4 V, its voltage is used as the reference voltage at the time of measurement.

ソース電流  $(V_{ref2} - 2.5) / 680$  最大値は、 $V_{ref2} = 4V$ の際に 2.2mA となります。

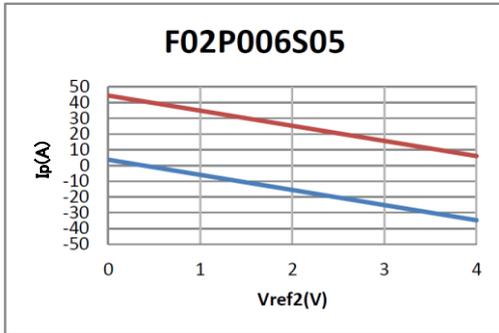

-either to source a typical current of  $(V_{ref2} - 2.5) / 680$ , the maximum value will be 2.2mA typ. when  $V_{ref2} = 4V$ .

シンク電流  $(2.5 - V_{ref2}) / 680$  最大値は、 $V_{ref2} = 0V$ の際に 3.68mA となります。

-or to sink a typical current of  $(2.5 - V_{ref2}) / 680$ , the maximum value will be 3.68mA typ. when  $V_{ref2} = 0V$ .
