b) Passband Frequency Response

As shown in **Figure 1**, the typical gain of the WCA05300A is 24.0 dB across 50 MHz to 200 MHz. The amplifier offers exceptional gain flatness with the typical gain variation of +/- 0.15 dB through out the passband. The typical input and output return losses are 15 dB across the frequency from 50 MHz to 200 MHz.

Figure 2 shows the measured P_{1dB} of the WCA05300A. The typical P_{1dB} is from 7.0 dBm to 12.0 dBm in the frequency range of 50 MHz to 200 MHz, respectively.

Figure 3 illustrates the measured noise figure performance at full temperature. The noise figure is typically 0.38 dB to 0.50 dB across the frequency range of 50 MHz to 200 MHz. The higher noise figure at the lower frequency in the passband is due to the transistor internal higher low frequency thermal noise. The noise figure only increase around 0.15 dB at 85 C° and decease 0.13 dB at -40 C°.

Figure 4 demonstrates the stability factor *k* of the amplifier. *k* is greater than 1.0 at all frequencies and the amplifier is unconditional stable.

Figure 5 shows the frequency response of WCA05300A in the extended frequency band.

Figure 6 shows the mechanical outline of WCA05300A. It is a standard WP-6 connectorized housing.
