

7-13GHz Low Noise Amplifier

GaAs Monolithic Microwave IC

Description

The CHA2063a is a two-stage wide band monolithic low noise amplifier.

The circuit is manufactured with a PM-HEMT process : 0.25 μ m gate length, via holes through the substrate, air bridges and electron beam gate lithography.

It is supplied in chip form or in an hermetic leadless ceramic package.

Main Features

- | Broad band performance 7-13GHz
- | 2.0dB noise figure, 8-13GHz
- | 19dB gain
- | Low DC power consumption, 40mA
- | 18dBm 3rd order intercept point
- | Chip size : 1,52 x 1,27 x 0.1mm

Pin Out

- 1 - NC
- 2 - NC
- 3 - RF output
- 4 - NC
- 5 - Vdd
- 6 - RF input

Chip Biasing options

This chip is self-biased, and flexibility is provided by the access to number of pads. the internal DC electrical schematic is given in order to use these pads in a safe way.

The two requirements are :

N°1 : Not exceed $V_{ds} = 3.5V$ (internal Drain to Source voltage).

N°2 : Biased in such a way to limit V_{gs} positive value (internal Gate to Source voltage).

We propose two standard biasing :

Low Noise and low consumption :

$V_d = 4V$ and B & D grounded.

All the other pads non connected (NC).

$I_{dd} = 40mA$ & $P_{out-1dB} = +8dBm$ Typical.

(Equivalent to A,B,C,D,E : NC and $V_d=4V$; $G1=+2.5V$; $G2=+2.5V$).

Low Noise and high output power : $V_d = 5V$ and B & E grounded.

All the other pads non connected (NC).

$I_{dd} = 75mA$ & $P_{out-1dB} = +13dBm$ Typical.

(Equivalent to A,B,C,D,E : NC and $V_d=5V$; $G1=+2.5V$; $G2=+1.0V$).
