

## 5.5-9GHz Integrated Down Converter

**GaAs Monolithic Microwave IC in SMD leadless package**

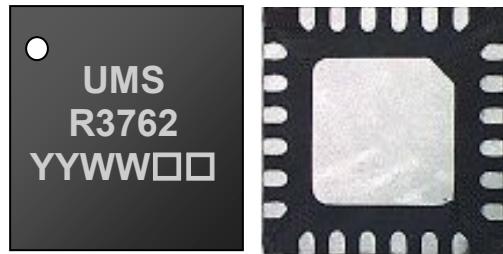

### Description

The CHR3762-QDG is a multifunction monolithic receiver, which integrates a balanced cold FET mixer, a LO buffer, and a RF low noise amplifier.

It is designed for a wide range of applications, from military to commercial communication systems.

The circuit is manufactured with a pHEMT process, 0.25µm gate length, via holes through the substrate, air bridges and electron beam gate lithography.

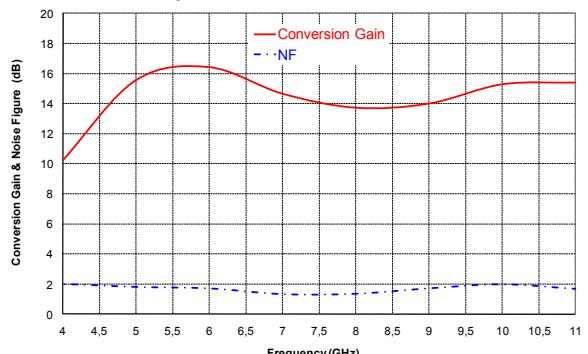

It is supplied in RoHS compliant SMD package.

### Main Features

- Broadband RF performances: 5.5-9GHz
- 14dB Conversion Gain
- 1.7dB Noise Figure
- 3dBm Input IP3
- DC bias: Vd = 3.0V @ Id = 100mA
- 24L-QFN4x4
- MSL1

Conversion Gain & Noise Figure versus RF frequency @ IF = 1GHz (LSB mode)

## Device thermal performances

All the figures given in this section are obtained assuming that the QFN device is cooled down only by conduction through the package thermal pad (no convection mode considered). The temperature is monitored at the package back-side interface ( $T_{case}$ ) as shown below.

The system maximum temperature must be adjusted in order to guarantee that  $T_{case}$  remains below the maximum value specified in the next table. So, the PCB system must be designed to comply with this requirement.

A derating must be applied on the dissipated power if the  $T_{case}$  temperature cannot be maintained below the maximum temperature specified (see the curve  $P_{diss. Max}$ ) in order to guarantee the nominal device life time (MTTF).

<sup>(1)</sup> The package outline drawing included in this data-sheet is given for indication. Refer to the application note AN0017 (<http://www.ums-gaas.com>) for exact package dimensions.

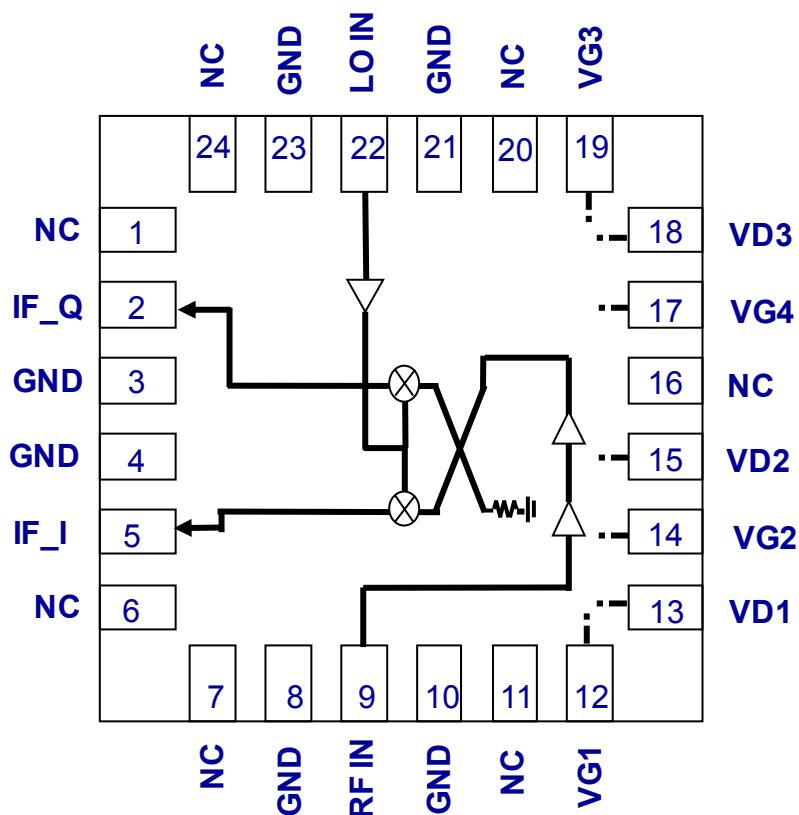

<sup>(2)</sup> It is strongly recommended to ground all pins marked "Gnd" through the PCB board. Ensure that the PCB board is designed to provide the best possible ground to the package.

## Evaluation mother board

- Compatible with the proposed footprint.
- Based on typically Ro4003 / 8mils or equivalent.
- Using a micro-strip to coplanar transition to access the package.
- Recommended for implementation of this product on a module board.
- Decoupling capacitors of  $100\text{pF} \pm 5\%$  and  $10\text{nF} \pm 10\%$  are recommended for all DC accesses.
- See application note AN0017 for details.
- Hybrid coupler  $90^\circ$  for 1-2GHz.

## Notes

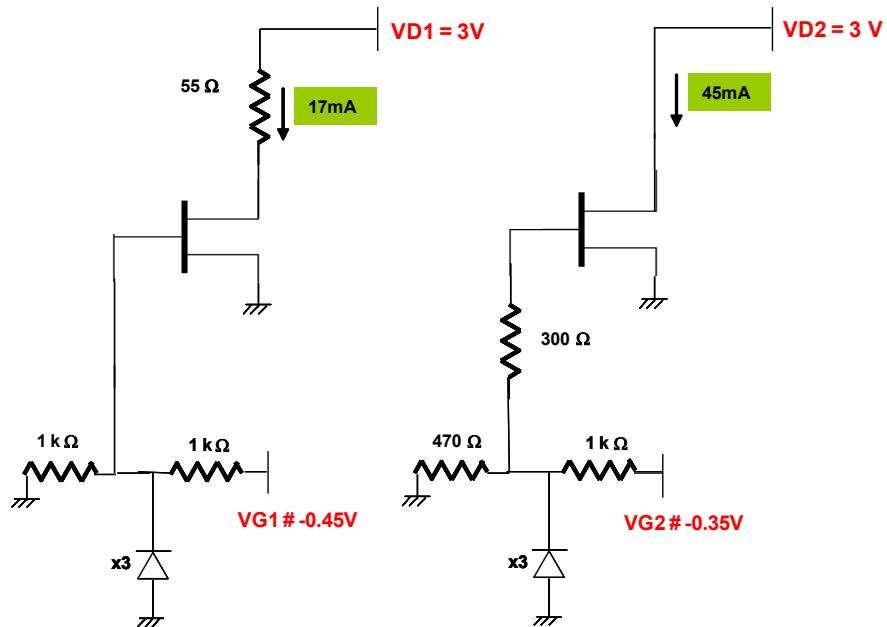

ESD protections are implemented on gate DC bias accesses.

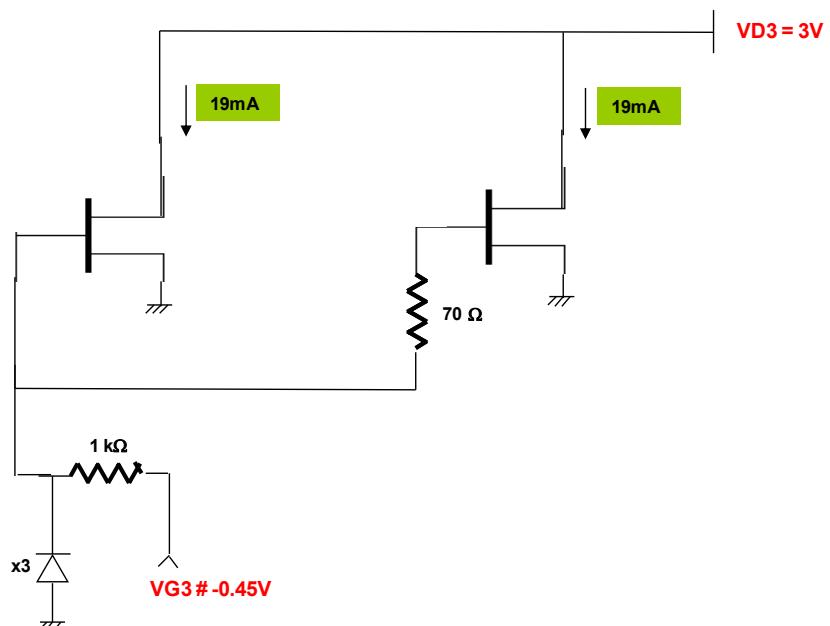

The DC connections do not include any decoupling capacitor in package, therefore it is mandatory to provide a good external DC decoupling (100pF + 10nF) on the PC board, as close as possible to the package.

## DC Schematic

LNA: 3V, 62mA

LO Buffer: 3V, 38mA

## Recommended package footprint

Refer to the application note AN0017 available at <http://www.ums-gaas.com> for package footprint recommendations.

## SMD mounting procedure

For the mounting process standard techniques involving solder paste and a suitable reflow process can be used. For further details, see application note AN0017.

## Recommended environmental management

UMS products are compliant with the regulation in particular with the directives RoHS N°2011/65 and REACh N°1907/2006. More environmental data are available in the application note AN0019 also available at <http://www.ums-gaas.com>.

## Recommended ESD management

Refer to the application note AN0020 available at <http://www.ums-gaas.com> for ESD sensitivity and handling recommendations for the UMS package products.
