Table 5. Functional Pin Description

Name	Pin Number	Description
RF _{in} ⁽¹⁾	3	RF input for the power amplifier. RF _{in} has an RF choke to ground internal to the package. No external blocking is necessary unless externally applied DC is present on the trace.
RF _{out} / V_{DD}	8, 9	RF output for the power amplifier. This pin is DC coupled and requires a DC blocking capacitor.
V_{BA}	12	Bias voltage and current adjust pin.
GND	Backside Center Metal	The center metal base of the QFN package provides both DC and RF ground as well as the heat sink contact for the IC.

1. The RF input has a DC path to ground and therefore may require an external decoupling capacitor.
