Description

M/A-COM's MASWSS0148 is a GaAs monolithic single pole single throw (SPST) terminated switch in a lead-free 3 mm 12-lead PQFN plastic package. The MASWSS0148 is ideally suited for use where low power consumption, small size and high isolation are required.

Typical applications include PCS and GSM LO switching, switch matrices and switched filter banks in systems such as radio and cellular equipment.

The MASWSS0148 is fabricated using a mature 1-micron gate length GaAs MESFET process. The process features full chip passivation for increased performance and reliability.

8. Differential voltage, $V(\text{state } 1) - V(\text{state } 0)$, must be +2.5 V minimum and must not exceed 8.5 V.

9. $0 = 0\text{ V} \pm 0.2\text{ V}$, $1 = V_{DD} = 2.5\text{ V to } 8.5\text{ V}$

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
