

RT/duroid® 6006/6010LM

High Frequency Laminates

RT/duroid® 6006/6010LM microwave laminates are ceramic-PTFE composites designed for electronic and microwave circuit applications requiring a high dielectric constant. RT/duroid 6006 laminate is available with a dielectric constant value of 6.15 and RT/duroid 6010LM laminate has a dielectric constant of 10.2.

RT/duroid 6006/6010LM microwave laminates feature ease of fabrication and stability in use. They have tight dielectric constant and thickness control, low moisture absorption, and good thermal mechanical stability.

RT/duroid 6006/6010LM laminates are supplied clad both sides with 1/2 oz. to 2 oz./ft² (18 to 70 μ m) standard and reverse treated electrodeposited copper foil. Thick aluminum, brass, or copper plate on one side may be specified.

Standard tolerance dielectric thicknesses of 0.010", 0.025", 0.050", 0.075", and 0.100" (0.254, 0.635, 1.270, 1.905, 2.54 mm) are available. When ordering RT/duroid 6006 and RT/duroid 6010LM laminates, it is important to specify dielectric thickness and weight of copper foil required.

Data Sheet

Features and benefits:

- High dielectric constant for circuit size reduction
- Low loss. Ideal for operating at X-band or below
- Low Z-axis expansion for RT/duroid 6010LM. Provides reliable plated through holes in multilayer boards
- Low moisture absorption for RT/duroid 6010LM. Reduces effects of moisture on electrical loss
- Tight ϵ_r and thickness control for repeatable circuit performance

Some Typical Applications:

- Patch Antennas
- Satellite Communications Systems
- Power Amplifiers
- Aircraft Collision Avoidance Systems
- Ground Radar Warning Systems

PROPERTY	TYPICAL VALUES		DIRECTION	UNITS	CONDITIONS	TEST METHOD
	RT/duroid 6006	RT/duroid 6010.2LM

Lead-Free Process Compatible	Yes	Yes				

[1] SI unit given first with other frequently used units in parentheses.

[2] Dielectric constant is based on .025 dielectric thickness, one ounce electrodeposited copper on two sides.

[3] The design Dk is an average number from several different tested lots of material and on the most common thickness/s. If more detailed information is required, please contact Rogers Corporation.

Refer to Rogers' technical paper "Dielectric Properties of High Frequency Materials" available at <http://www.rogerscorp.com/acm>.

Typical values are a representation of an average value for the population of the property. For specification values contact Rogers Corporation.

STANDARD THICKNESS	STANDARD PANEL SIZE	STANDARD COPPER CLADDING
0.005" (0.127mm) 0.010" (0.254mm) 0.025" (0.635mm) 0.050" (1.27mm) 0.075" (1.90mm) 0.100" (2.50mm) Non-standard thicknesses available	10" X 10" (254 X 254mm) 10" X 20" (254 X 508mm) *20" X 20" (508 X 508mm) - non-standard 18" X 12" (457 X 305 mm) *18" X 24" (457 X 610 mm) - non-standard (*note: the above 2 panel sizes are available in >0.025" only)	½ oz. (18 µm), 1 oz. (35µm), 2 oz. (70µm) electrodeposited & reverse treated EDC copper foil. Heavy metal claddings are available, based on dielectric thickness. Contact Rogers' Customer Service.
