

Introducing a sample kit of the subminiature Xinger balun transformers, including the latest, catalog standard devices. These subminiature Xinger products are designed and manufactured just like their higher power cousins, but optimized for both compact wireless infrastructure applications (e.g. A-to-D converters, receivers, transceivers, and amplifiers for pico or home base stations) and wireless consumer electronics applications (e.g. handhelds, digital/analog conversion, broadcasting, Bluetooth® devices)

Features

- Product family supports wide array of bands and protocols, such as GPS, Bluetooth®, ZigBee®, WiFi 802.11ac/g/n, 3G, LTE, RFID, PCS, GSM, and DCS
- Low cost in volume with excellent performance for their size (power handling, insertion loss, etc.)
- Non-conductive surface; 100% RF-tested; RoHS compliant; shipped on tape & reel
