Functional Block Diagram

General Description

The TQP9107 is a high-efficiency two-stage power amplifier in a low-cost surface-mount package. The amplifier is able to achieve 31% power added efficiency at +27 dBm output power while operating with a low 84 mA idle current. The amplifier is designed to ensure that all odd-order IMD products are below -17 dBm at all output power levels below +24 dBm/tone.

The TQP9107 integrates two high performance amplifier stages onto a module to allow for a compact system design and requires very few external components for operation. The amplifier is bias adjustable allowing the amplifier's power consumption to be optimized. The TQP9107 is available in a lead-free/RoHS-compliant 13-pin 3.5x4.5mm surface mount package and is pin-compatible to the higher frequency band version in the family with the TQP9108 (1.7-2.17 GHz).

PCB Mounting Pattern

Recommend PCB land-pad metallization (Top View)

Recommended PCB solder mask opening (Top View)

Notes:

1. A heat sink underneath the area of the PCB for the mounted device is strictly required for proper thermal operation. Damage to the device can occur without the use of one.
2. Ground / thermal vias are critical for the proper performance of this device. Vias should use a .35mm (#80 / .0135") diameter drill and have a final plated thru diameter of .25 mm (.010").
3. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.
