

## 23-26GHz Reflective SP4T Switch

### GaAs Monolithic Microwave IC in SMD leadless package

#### Description

The CHS2411-QDG (CHS2412-QDG, see Note) is a monolithic reflective SP4T switch in K-Band. Positive supply voltage only is required.

The circuit is manufactured with a standard pHEMT process, 0.25 $\mu$ m gate length, via holes through the substrate, air bridges and electron beam gate lithography.

**Notes**

To cope with CHS2411-QDG high volume production for Automotive radar, UMS has developed and qualified a dual source part named CHS2412-QDG. It provides the same electrical and thermal performances, identical pin out and packaging and meets the same quality standard as CHS2411-QDG. It is compatible with Automotive production flow. The dual source CHS2412-QDG is recognized by package marking S2412.

## Recommended package footprint

Refer to the application note AN0017 available at <http://www.ums-gaas.com> for package footprint recommendations.

## SMD mounting procedure

For the mounting process standard techniques involving solder paste and a suitable reflow process can be used. For further details, see application note AN0017.

## Recommended environmental management

UMS products are compliant with the regulation in particular with the directives RoHS N°2011/65 and REACH N°1907/2006. More environmental data are available in the application note AN0019 also available at <http://www.ums-gaas.com>.

## Recommended ESD management

Refer to the application note AN0020 available at <http://www.ums-gaas.com> for ESD sensitivity and handling recommendations for the UMS package products.
